

Hong Kong Electric powered by Instek Digital

Hong Kong Electric chose Instek Digital's video management series, real-time video analytics and recorders because of their high resolution capability, high intelligence and high availability features. MatriVideo VMS and recorders are integrated with over a dozen Arecont camera models. The recorders have the storage space required to store the large megapixel images.

Instek Digital's real-time video analytics seamlessly works with the Arecont cameras to allow alarm creation built around parameters. Alarms are triggered on Command Center and can be viewed with a simple click of the mouse.

The distributed architecture and failover recorders give the installation maximum uptime. Because there is no single point of failure, no single server can jeopardize the integrity of the system. And, if a single recorder goes down, a failover server can instantly be activated to take over the recording responsibilities of the down server.
