

Newcastle University upgrade surveillance system with Instek Digital

Newcastle University chose Instek Digital to upgrade its campus-wide surveillance system. Newer-generation DVRs and additional high quality cameras were installed to the legacy system to improve frame-rates and visibility coverage. The MatriVideo Hybrid DVR (hDVR) systems spanned the university network to connect the monitoring of campus buildings, museums and public spaces.

The system included a campus central command center, several remote campus monitoring points and

satellite monitoring to the Northumbria Police CCTV system based in the city center. This provided the police with an instant overview of any incidents on campus to ensure a rapid response.
