

Newcastle NHS Trust using Instek Digital VMS and nCCTV

The Newcastle NHS Trust offers the most services and is one of the largest NHS trusts in the UK. To satisfy the unique security needs that come with a hospital setting and the added challenge of multiple locations, Instek Digital centralized 600 cameras onto a 3-screen MatriVideo™ Command Center and nCCTV video walls.

Within 3 weeks of installation the MatriVideo™ easy-search features prevented the evacuation of an entire hospital wing due to a potential bomb-alert when a large package was reported left outside a building entrance – playback identified a patient known to be in a confused state, and the package was confirmed to be harmless.
