

V2POS

MatriVideo Video Verification POS System

Features

- ◆ Compact and Easy-to-Install Package for Quick Service Restaurant
- ◆ Seamless Integrated Solution for POS and MatriVideo system
- ◆ Perfect Fit for Multi-Site Management
- ◆ Search Engine for Comprehensive POS Transactions with Video Verification
- ◆ Increase Profits and Decrease Shrinkage
- ◆ POS Audit Trail with Video Evidence
- ◆ Video Driven Employee Training and Customer Service Management
- ◆ Applied to Quick Service Restaurants, Convenience Stores, Gasoline Stations, Public Transportation Terminals and More

Video is quickly becoming the new market benchmark for POS integration. POS tying comprehensive search functionality with an advanced video management solution enables business owners and managers to increase productivity and improve efficiency. Daily operational questions, such as “What time did my manager open the store today?”, “Did we have too many employees today?”, “Why was this transaction cancelled?”, “What is this employee doing differently to generate more revenue?” can now be effortlessly answered.

VIDEO “VERIFY” TICKETS AND ITEMS

Transaction details of the ticket and the item can be easily verified with the associated video. the POS interface provides digital playback functionality (Fast Forward, Fast Backward, Pause Stop, Play) in sync with the POS data for a thorough overview and the capability to substantiate a transaction by taking a snapshot.

Archived transaction data is stored and can be periodically reviewed at each manager’s individual availability and convenience.

CUSTOMIZED REPORTING

The V²POS is capable of providing exception based customized reporting, such as recalled and cancelled tickets, unclaimed and clear order tickets, gift cards, discounts and much more. this in turn allow s the manager to quickly review associated video with problematic transactions.

The video confirms any and all ticket activity within a report. Customized reporting breaks down the types of transactions and links it with the resultant video for piece of mind.

SOFTWARE SUITE AND ORDER MANAGEMENT

Employee profiles can be tracked individually with numerous triggers such as payroll and overtime, working hours and much more. the managers can easily review the key statistics and verify it with video to compare employee productivity.

The V²POS has the capability to customize order enter screens based on operator stations. managers no longer have to operate with or settle for a “generic” offering.

RUNNING AN “EFFICIENT” BUSINESS

Multiple camera angles provide direct views of the cash registers and the facility, linking it seamlessly with the POS data in place and with an accurate time sync. things which negatively impact a successful business operation such as time card frauds, theft and inappropriate behavior can be substantially reduced.

With video attached to the POS, owners can visually track the discounts and the complementary food and merchandise that is handed out and if a manager is physically present to monitor these types of transactions. this can significantly help to reduce operational costs.

Owners and managers can also monitor productivity and training effectiveness with the V²POS. a business owner realizes that business loss at times is also attributed to lack of or mediocre training. Utilizing the comprehensive search and reporting functionality of the POS with Video, management can effortlessly identify the trouble spots and improve training programs.

V²POS can also improve the quality of customer service. Video and audio associations with transactions can allow a manager to review the customer interactions and implement enhancements to boost customer flow and profits.

Touchscreen

- Integrated access control for each terminal
- Optional accessories: Customer Pole Display and Bar Code Scanner
- Compact fanless design
- 1GHz Intel based technology
- Specifications - 12.51"(W) x 10.0"(D) x 13.8"(H)
- Electrical Specifications - AC100~240V DC + 19V 90W Power Adapter

Back Office

- Intel Core2 Duo
- Memory - 2GB, 667MHz, DDR2 SDRAM Memory, NECC
- System standard with 17" monitor, keyboard and mouse
- Electrical Specifications - AC120V~60Hz 130mA

Compact NVR

- Supports 4 or 9 channels
- Compact size with high performance
- Embedded Linux OS
- Distributed architecture with centralized management
- High network throughput and low power consumption
- Real time video recording
- Remote IT management & configuration

Progressive Scan Network Camera

- Progressive scan CMOS/ CCD
- Video compression: MPEG-4
- Automatic picture modification
- Superior video performance with low bit rate
- Fast and easy setup

Command Center One Software

- Plug & play capability
- Real time live camera view
- Instant playback for prompt response
- Comprehensive graphical display for video playback and alarm response

Check Pro Monitor and Keyboard Kit

- The Check Pro Keyboard Kit comes with an on board microprocessor
- Transmits through fiber optic assuring high speed transactions
- Monitors equipped with VGA connections
- Check Pro Electrical Specifications - AC 120V~60Hz 130mA
- Monitor Electrical Specifications - AC 120V~60Hz 2A
