

Project Reference Guide

Sofia Airport, Bulgaria

Sofia Airport is the largest commercial airport in Bulgaria. The airport consisted of one terminal for over 60 years until the construction of terminal two in 2007. Once terminal two was fully developed it was time to choose a stronger video security solution that could not only integrate with the legacy system but also expand its capabilities. Instek Digital was there to provide a fully scalable, reliable security system that far exceeded the expectations of the end user.

With over 5 million visitors to the airport annually, the video security solution must be reliable and easy to manage. Instek Digital's MatriVideo system managed this with its intuitive interface, built-in video analytics and cost-effective architecture.

Project Statistics

- Year of Installation:** 2007
- Area Covered:** 56,500 sqm
- Analog Cameras:** 200+
- Hybrid DVRs:** 12
- Command Center:** Yes
- nCCTV:** Yes
- Real Time Video Analytics:** Yes
